### Progression in Maths vocabulary

## **Table of Contents**

Introduction ... p.3

Key Principles: Maths... p.5

Progression in Vocabulary ... p. 6

## Introduction

These materials have been produced by the five schools in the Leeds East Primary Partnership, in order to assist teachers in making precise language choices and having this at the centre of their mathematics teaching to aid children's thinking and reasoning skills. These materials were produced as part of the Trust's focus on developing Maths during academic year 2020/21 and beyond. This document is the outcome of a working group comprising Maths subject leaders and Head teachers from all five schools. In addition, a sample of teachers within the Trust have piloted the use of the interaction cue cards and all teachers within the trust have collaboratively created the key selected vocabulary and resources they felt children required at each stage of their development in primary school.

For the Early Years Foundation Stage, teachers should refer to the detailed guidance set out in the either 'Development Matters' or 'Birth to 5' non statutory guidance alongside this document.

In the Progression in Maths vocabulary section (p.10), we have: prioritised Place value, the 4 operation strands and fractions, percentages and decimals. We have identified the appropriate National Curriculum objectives and language definition; exemplified what pupils need to do and provided example generalisations and sentence stems and offered high quality resources to encourage the use of this language in context. This is intended to support teachers in planning and delivering high-quality, contextualised, effective teaching sequences.

This document is intended as a guide, it is not intended to direct individual programmes of study within different school settings, classroom practice or methodology.

Teachers may choose to use success criteria in lessons to help pupils to understand what they have learnt and help them to judge whether a pupil has met the objectives for a strand of learning in Mathematics. Using success criteria does not mean that a pupil's learning is not independent; they would simply need to avoid modelling or over-scaffolding the expected outcome.

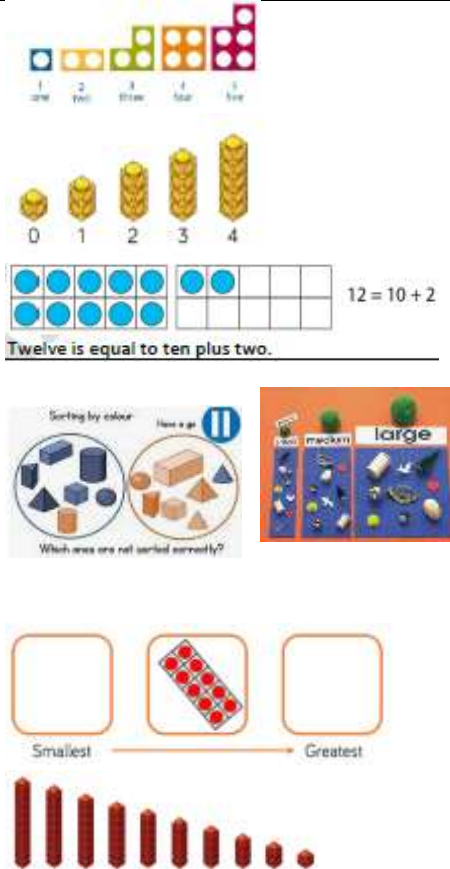

Moderation is a crucial part of teacher assessment. It allows teachers to benchmark their judgements, while helping to ensure that national standards are consistently applied and outcomes are reliable. Schools across the LEPP Trust should ensure that their teacher assessment judgements are moderated internally and across all the Trust Schools, using the statutory frameworks in Years EY, 2 & 6 as their main reference and as a basis for discussion. This will support accuracy and provide valuable opportunities for ongoing professional development.

## Maths: Key Principles

### Guiding principles:

1. All school staff should model and have high expectations of pupils' use of mathematical vocabulary and sentences. Staff and parents should be supported in their use and understanding of language as necessary.
2. Oracy, including oral rehearsal of key sentence stems involving precise mathematical vocabulary underpins children's reasoning development and should continue to feature highly throughout the teaching sequence.
3. Vocabulary should be introduced and used in sentences, supported by concrete, pictorial and abstract representations.
4. Mathematical thinking and talk should be supported by practical resources and **all** children should be encouraged to explore informal representations.
5. -Planned opportunities for pupil talk should incorporate the use of specific strategies to ensure maximum engagement e.g. say it show it, I say-you say, think pair share.
6. High language challenge should be introduced in the context of lower academic challenge i.e. using easier number contexts e.g. Y3 'multiplicand' introduced using examples from x2, x5, x10.
7. Provision throughout school should allow opportunities for children to be playful and creative with key mathematical concepts as well as within more structured teaching sequences when working towards specific tasks and outcomes.
8. The use of practical activities and supportive learning environments are recognised as essential components of effective teaching and learning. Visible and accessible examples and resources should be available to enable children to imitate and manipulate.
9. Additional support/Intervention should continue to be used to enable children to close any gaps in understanding. The use of high quality language along with CPA approaches should be integrated into all teaching and provision.

# Place Value

## Previously taught vocabulary

### PRE - NUSERY

number, sort, large/larger/largest, smaller/smallest, order, count (up) to, count on (from, to), count back (from, to)

before/after, more/more than, less/less than, one more/ one less, greater/greater than, greatest, fewer/fewer than, least, most/bigger, pairs

**Even** - an amount / number that is made of pairs

**Represent** - To show a mathematical concept using words, numerals and symbols, pictures, diagrams, or concrete manipulatives.

[\\*LINK TO REC MANIP 1 VIDEO\\*](#)

[\\*LINK TO REC MANIP 2 VIDEO\\*](#)

[\\*LINK TO NURSERY SORTING](#)

**Part** – part of a whole set, amount or number. A visual representation to show how numbers are composed

**Whole** – a complete set, amount or number

**Sort** - To classify a set of objects/ pictures into specified categories.

My sets are **equal** because there are four bears in this set and there are four bears in this set.

\_\_\_ comes before \_\_\_  
 \_\_\_ comes after \_\_\_  
 One more/less than \_\_\_ is \_\_\_  
 \_\_\_ is one more/less than \_\_\_.  
 \_\_\_ is more than \_\_\_ but less than \_\_\_.  
 \_\_\_ is in between \_\_\_ and \_\_\_  
 The number of the day is 3. One less than 3 is 2. One more than 3 is 4.

[\\*LINK TO NURSERY VIDEO\\*](#)

\_\_\_ is made of pairs. It is an even number.

\_\_\_ is not made up of pairs. It is an odd number.

8 represented as 3 fingers and 5 fingers.

One part is \_\_\_  
 The other part is \_\_\_  
 The whole is \_\_\_

**Number of the day is 3**

1	6	3																					
H	T	O																					
6	3	5																					
<p><b>Previously taught vocabulary Year 1</b> in between, counting, in steps of, estimate, nearly, multiple, value, numeral, digit, partition, equal value, ordinal</p>																							
<p><b>Previously taught vocabulary Year 2</b> zero (place holder), hundreds, exchange/ regroup, sequence, counting in multiples of, equality/inequality, &gt; greater than, &lt; less than, standard partitioning, non-standard partitioning, predict, quantity, equivalent</p>																							

The previous multiple of 10 is \_\_\_\_\_. The next multiple of 10 is \_\_\_\_\_. \_\_\_\_\_ is between \_\_\_\_\_ and \_\_\_\_\_.

I know that \_\_\_\_\_ plus \_\_\_\_\_ is equal to ten. So I know that \_\_\_\_\_ tens plus \_\_\_\_\_ tens is equal to ten tens.

\_\_\_\_\_ plus \_\_\_\_\_ is equal to one hundred.

I know that ten minus \_\_\_\_\_ is equal to \_\_\_\_\_. So I know that ten tens minus \_\_\_\_\_ tens is equal to \_\_\_\_\_ tens.

One hundred minus \_\_\_\_\_ is equal to \_\_\_\_\_.

I know that 16 subtract 10 is equal to 6 so I know that 16 tens subtract 10 tens is equal to 6 tens.

One part is 10 tens. The other part is 6 tens. The whole is 16 tens or one hundred and sixty.

We can partition the whole in different ways.

1000	2000	3000	4000	5000	6000	7000	8000	9000
100	200	300	400	500	600	700	800	900
10	20	30	40	50	60	70	80	90
1	2	3	4	5	6	7	8	9

10	10 tens
7	7 tens
3	3 tens

$$100 - 20 = 80$$

### Different Ways

Make different **3-digit numbers** using the digits **1, 2 and 4**. Position your numbers accurately on the number line.

Captain Conjecture says 'The number in the place value grid is the largest 3-digit number you can make using all 10 counters.'

100s	10s	1s
5	1	1

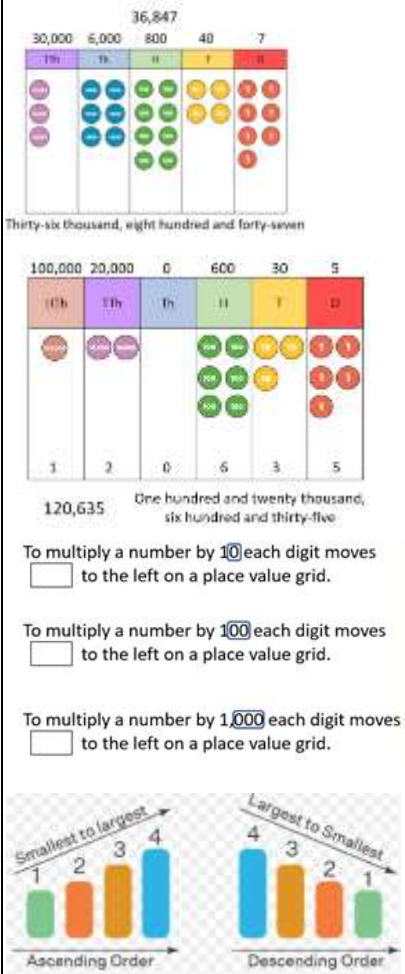

Do you agree?

Explain your reasoning.

3	<p>complement column column addition approximate(ly) efficient</p> <p><b>Previously taught vocabulary Year 1</b> near double, number bonds/ number pairs, fact families/ related facts/ inverse, addend, sum, calculate/calculation, equation, estimate, equal value</p> <p><b>Previously taught vocabulary Year 2</b> exchange/ regroup, balanced equation, commutative, equivalent</p>	<p><b>complement-</b> in addition a number and its complement make a total eg 30 is the complement to 70 to make 100</p> <p><b>Column:</b> Vertical arrangement</p> <p><b>Column addition:</b> A formal method of setting out an addition in ordered columns. Each column represents a place value</p> <p><b>efficient method:</b> a means of calculation (which can be mental or written) that achieves a correct answer with as few steps as possible</p>	<p>Addend plus addend plus addend is equal to the sum.</p> <p>I have added ___ to the addend, so I need to subtract ___ from the other addend</p> <p>First we add __. __ plus __ is equal to __. Then we adjust- __ minus __ is equal to __.</p> <p>195 is close to 200 and 306 is close to 300 so my estimate is 200 add 300 which is equal to 500.</p> <p>24 add 6 is equal to 30 and 30 add 70 is equal to 100. We can use number bonds to ten to calculate complements to 100.</p> <p>To add 50 to 70, I will partition the 50 and bridge through 100. First I add 30, then I add 20</p>	 <p><b>addition</b></p> <p>10 sum</p> <p>6 4 addend addend</p> <p>addend + addend = sum</p> <p><a href="#">*LINK TO YEAR 3 ADDITION BAR MODEL VIDEO*</a></p> <p>35 + 49 = 34 + 50 = 84</p> <p>520 + 299 = 819</p> <p>-1 +1</p> <p>519 + 300 = 819</p> <p><b>Bridging:</b></p> <p>70 100 120</p> <p>+30 +20</p> <p>+50</p>	<p><b>Websites:</b></p> <p><a href="http://www.mathsbot.com">www.mathsbot.com</a></p> <p><a href="https://nrich.maths.org/13787">https://nrich.maths.org/13787</a></p> <p><a href="https://thirdspacelearning.com/maths-resources/">https://thirdspacelearning.com/maths-resources/</a></p> <p><a href="https://www.iseemaths.com/wp-content/uploads/2018/10/I-See-Reasoning-LKS2-Sample.pdf">https://www.iseemaths.com/wp-content/uploads/2018/10/I-See-Reasoning-LKS2-Sample.pdf</a></p> <p><a href="https://www.ncetm.org.uk/media/oagfcvjg">https://www.ncetm.org.uk/media/oagfcvjg</a></p> <p><a href="#">/mastery_assessment_y3.pdf</a></p> <p>White Rose Maths Hub</p> <p>Sort these into those that can be calculated mentally and those you would use column addition to calculate:</p> <p>164 + 36 237 + 156 349 + 84 120 + 130 Explain reasoning</p>

98 add 2 is equal to 100 so I can partition the addend 7 into 2 and 5.

In column addition we line up the ones.

In column addition, we start at the right hand side.

The ones/ tens/ hundreds column represents \_\_\_\_ ones plus \_\_\_\_ ones is equal to \_\_\_\_ ones.

7 ones plus 6 ones is equal to 13 ones. 13 ones is equal to one ten and 3 ones.

If the column sum is equal to ten or more, we must exchange/ regroup.

[\\*LINK TO YEAR 3 COLUMN ADDITION VIDEO\\*](#)

Arrange the digits to make two different additions that have just one exchange.

## Classroom secrets

Complete the scenarios so they match the bar model.

Ron has \_\_\_\_ altogether. He spends \_\_\_\_ and has £476 pounds left.

Jack has \_\_\_\_ Eva has £200 They have \_\_\_\_ altogether.

Amir has £200 more than Rosie. Amir has \_\_\_\_ Rosie has \_\_\_\_

Draw your own bar model where one of the parts is a multiple of 100. Write scenarios to match the bar model.

Ron has £676 altogether. He spends £200 and has £476 pounds left.

Jack has £476 Eva has £200 They have £676 altogether.

Amir has £200 more than Rosie. Amir has £676 Rosie has £476

Children will then draw their own bar models to match the numbers they have chosen.

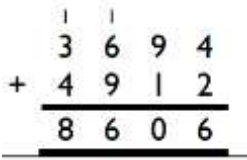

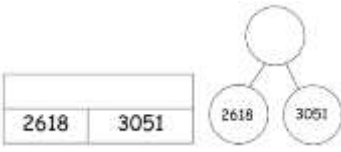

### Rank by Difficulty

Column additions are more challenging when...

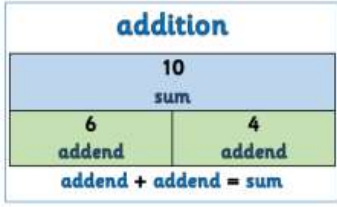

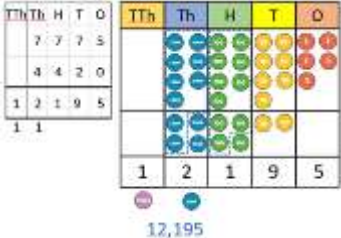

Which additions are harder to calculate and which are easier? (give reasoning)

Find some additions that would have the digit 2 in the ones column.

10 minuend											
6 subtrahend	4 difference										
minuend - subtrahend = difference											

The ones column represents \_\_\_ ones minus \_\_\_ ones is equal to \_\_\_ ones.

The tens column represents \_\_\_ tens minus \_\_\_ tens is equal to \_\_\_ tens.

One ten can be exchanged/ regrouped for ten ones. One hundred can be exchanged/ regrouped for ten tens.

These calculations require one/ more than one exchange/ regrouping.

[\\*LINK TO YEAR 3 COLUMN SUBTRACTION VIDEO\\*](#)

[\\*LINK TO YEAR 3 COLUMN SUBTRACTION VIDEO\\*](#)

Partitioning the subtrahend without bridging:

finding the difference by counting up:

87
59    ?

$87 - 59 = 28$  and  $87 - 28 = 59$

## Spot the Mistake

589 – 70 is equal to 582

Amir

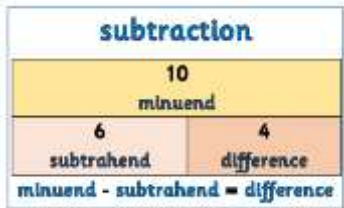

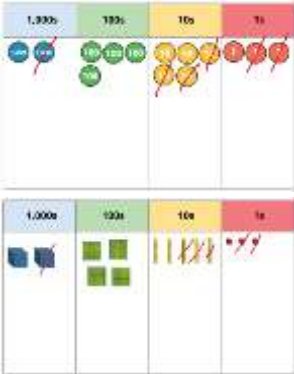

What should the answer be?

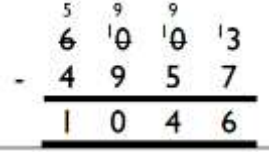

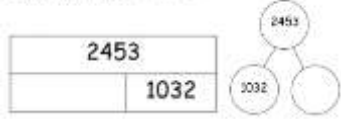

Which of these calculations need an exchange?

H	T	O	H	T	O	H	T	O
6	5	8	3	2	3	4	2	9
-	1	4	-	1	1	-	1	7

How many different ways can you find  $138 - 90$ . Use diagrams and equations to explain your methods. Which strategy do you prefer?

shortened to: "1 ten, 2 tens, 3 tens..."

There are \_\_\_\_ equal groups of \_\_\_\_.

There are \_\_\_\_ in each group.

There are \_\_\_\_ groups of \_\_\_\_.

There are \_\_\_\_ altogether.

[\\*LINK TO Y2 MULTIPLICATION VIDEO](#)

I have \_\_\_\_ groups. Each group has \_\_\_\_.

$$2 \times 10 = 10 \times 2$$

We can represent repeated addition using multiplication.

$$\_ + \_ + \_ = \_ \times \_$$

There are \_\_\_\_ in each row.

There are \_\_\_\_ rows.

There are \_\_\_\_ in each column.

There are \_\_\_\_ columns.

There are \_\_\_\_ altogether.

$$9 \times 10$$

9 represents the number of groups.

10 represents how many are in each group.

$$9 \text{ groups of } 10 = 90$$

$$\square \times \square = \square$$

$$5 + 5 + 5$$

$$3 \times 5$$

$$5 + 5 + 5 = 3 \times 5$$

$$\square + \square + \square = \square$$

$$\square \times \square = \square$$

There are  pears.

$$9 \times 10$$

What could the factors be?”</p>
	<p><b>Previously taught vocabulary Year 1</b> multiplication, multiply, times, times tables, repeat, repeated addition, odd, even, array, row/column, quantity/amount, calculate/calculation, equation, estimate, equal value, fact families/ related facts/ inverse</p>				
	<p><b>Previously taught vocabulary Year 2</b> product, commutative, exchange/ regroup, balanced equation, equivalent</p>				

**Efficient:** a means of calculation (which can be mental or written) that achieves a correct answer with as few steps as possible.

**Approximate:** An approximation is **anything that is similar, but not exactly equal, to something else.**

The multiplier (8) can be partitioned into 5 and 3. 8 groups of 3 is equal to 5 groups of 3 and 3 groups of 3.

Products in the six times table are also in the three times table. Products in the 3 times table are half products in the 6 times table. For every one group of 6 there are two groups of 3.

If both factors are odd, the product is odd. If one of the factors is even, the product is even.

2 x 34: there are two lots of 3 tens and 4 ones

3	3	3	3	3	3
6		6		6	

2	x	9	=	18	
even		odd		even	
9	x	2	=	18	
odd		even		even	

Tens			Ones			
10	10	10	1	1	1	1
10	10	10	1	1	1	1

This shows  $4 \times 3 = 12$

'Draw a picture like this to show:'

$$4 \times 6 = 24$$

How would you solve:  $4 \times 2 \times 8 \times 0 \times 10$

On a blank hundred square, colour multiples of 8 red and multiples of 4 blue.

**Always, Sometimes, Never**

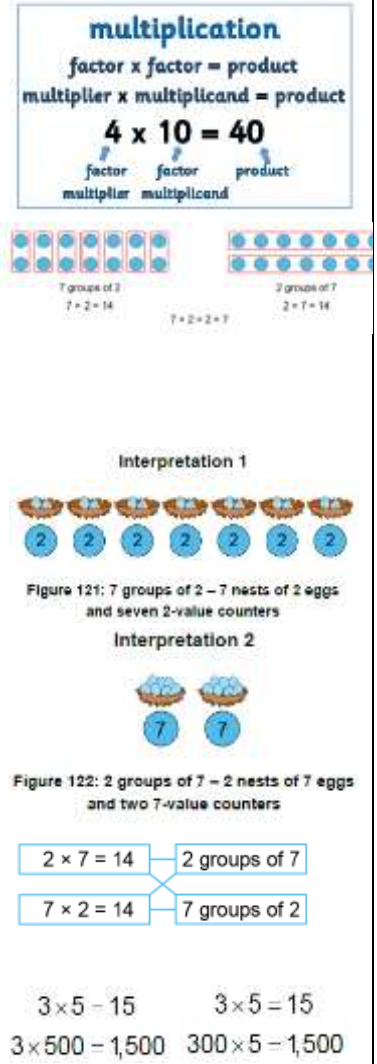

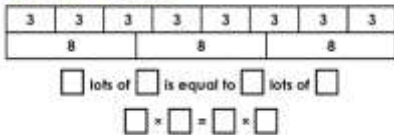

- Multiples of 4 are also multiples of 8
- Multiples of 8 are also multiples of 4

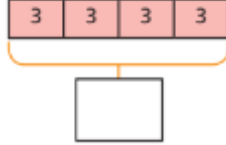

Use the number cards to make multiplication and division sentences.

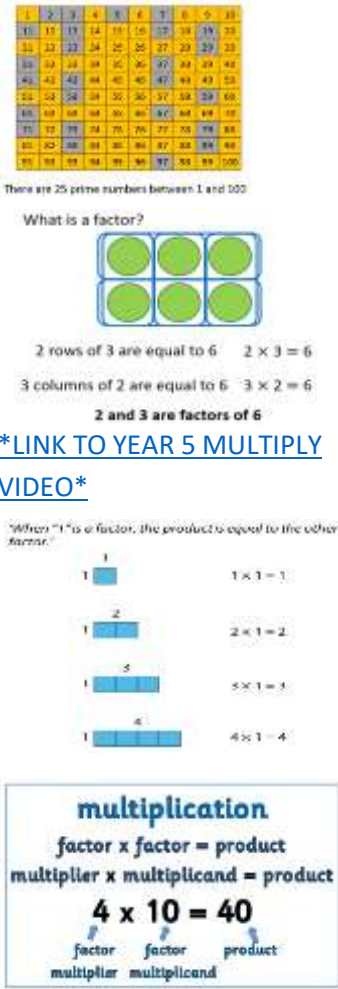

How many can you make?

"The remainder is always less than the divisor."

There are 23 scouts altogether.  
4 scouts can fit in each tent.  
 How many tents will be needed for 23 scouts?

23 divided into groups of 4 is 5 groups of 4 with 3 remaining.  
 There are 23 altogether. I divided them into groups of 4.  
 There are 5 groups and 3 remaining. They would need 6 tents.

### **Dividing by 10/100/ 1000**

When a number is divided by ten, the digits move one place to the right.

When a number is divided by 100, the digits move two places to the right.

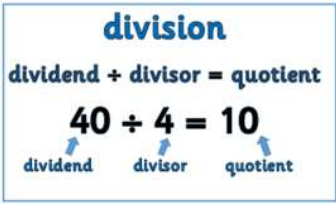

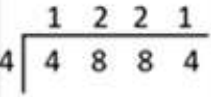

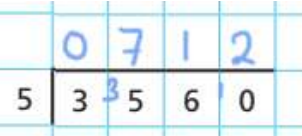

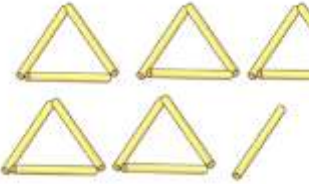

When a number is divided by one thousand, the digits move three places to the right.

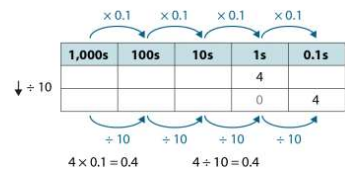

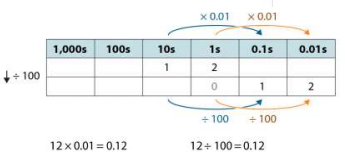

Divide 12 by 100.  $\downarrow \div 100$

Divide '4' by ten.

Shows how many parts we have.

**Common denominator:**

When fractions have the same denominator

To compare fractions with different numerators and denominators convert to **common denominators**.

[\\*LINK TO COMMON DENOMINATOR VIDEO](#)

**Equivalent fractions:**

When two or more fractions have the same value.

[\\*LINK TO FRACTIONS TO DECIMALS VIDEO 1](#)

[\\*LINK TO FRACTIONS TO DECIMALS VIDEO 2](#)

[\\*LINK TO PERCENTAGE OF AN AMOUNT VIDEO](#)

When two fractions have the same numerator, the one with the \_\_\_\_\_ denominator is the greater fraction.

To find a common denominator, identify the lowest common multiple of the denominators then create an equivalent fraction.

We can find a common denominator for two non-related fractions by multiplying their denominators.

If you multiply the two denominators 3 and 5 you will get the common denominator product of \_\_\_\_\_.

The numerator has been scaled up/down by \_\_\_\_\_

The denominator has been scaled up/down by \_\_\_\_\_

These fractions are /are not equivalent.

The highest common factor is \_\_\_\_\_ so divide the numerator and denominator by \_\_\_\_\_

The whole is divided into a hundred equal parts and \_\_\_\_\_ of them is/ are shaded; this is \_\_\_\_\_ hundredth(s) of the whole.

Highest common factor = 3
